Bio

Hi! I'm a student software developer who's currently attending the Coder Academy Bootcamp. I have a background in business where prior to this I was enrolled in the Bachelor of Advanced Business course at UQ and was working as an business intern for the dental cover company smile.com.au. I also have customer support experience working for Jumbo Interactive as well as a few odd hospitality jobs. The reason for my change is because I realised that I had a love for building things and I found that the tech industry was the perfect industry for me. I am especially drawn into how forward thinking and innovative the industry is.

In my spare time I love singing, playing instruments (guitar & piano), dance, staying active, watching anime and making the most of my 20s. Please message me as well if you have any anime or film recommendations! 😊

WORK HISTORY

Currently located in Brisbane, Australia 

Resume 

Full-time

Customer Support [@Jumbo Interactive](#)

May 2021 - Sep 2022

- Customer support work
- Also worked on fortnightly spring projects via JIRA

Business Intern & Stakeholder Engagement [@smile.com.au](#)

Feb 2019 - Apr 2021

- Stakeholder engagement and support for 8 Health Fund Partners (such as Defence Health and Peoplecare) and over 500 dental practices across Australia
- Managed and assisted in large projects for engagement and onboarding of dental practices
- Was responsible for completing and managing a large project involving the automation of fees whilst working closely with the web-developer team

CONTACT

Feel free to follow and connect with me using the social links below!

You can also contact me directly via the form:

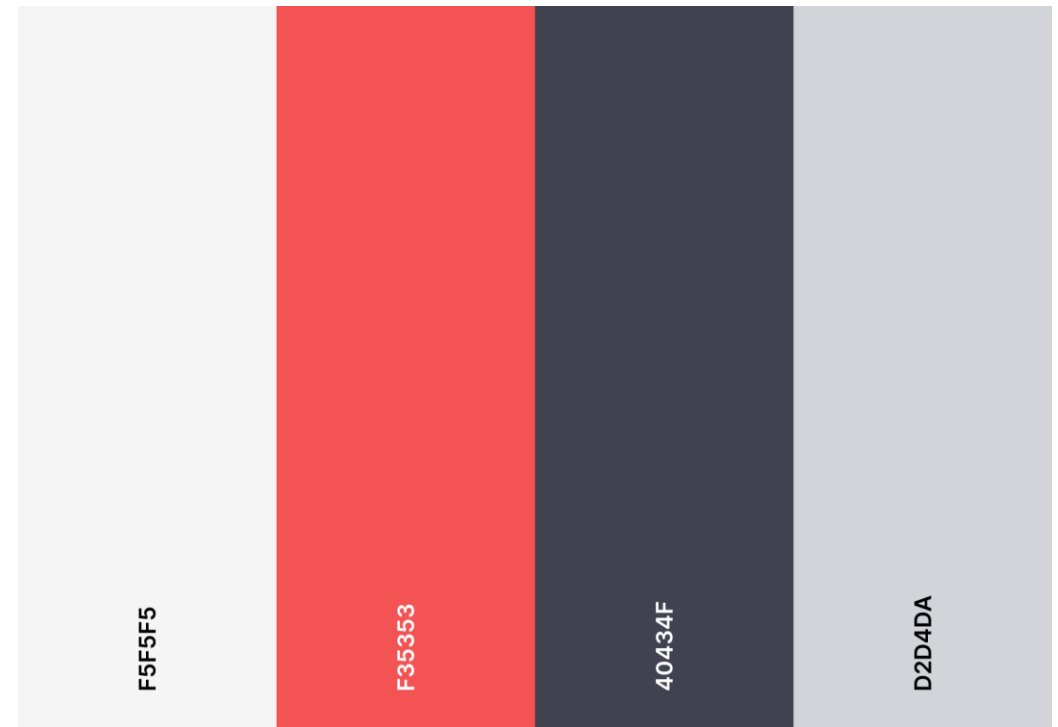

Submit

Color palette

- Simplistic and minimal
- Not too many colors in order to not overwhelm the user + provide a professional display
- Inspired by websites such as Notion and the app Beem where they use minimal colors

-
- White as the main color. Color used was a slightly creamy coloured white. Softer and not as harsh as just plain white
 - Soft red to be visually eye catching
 - Grey to balance the white and red
 - Overall colors are to induce a feeling of comfort

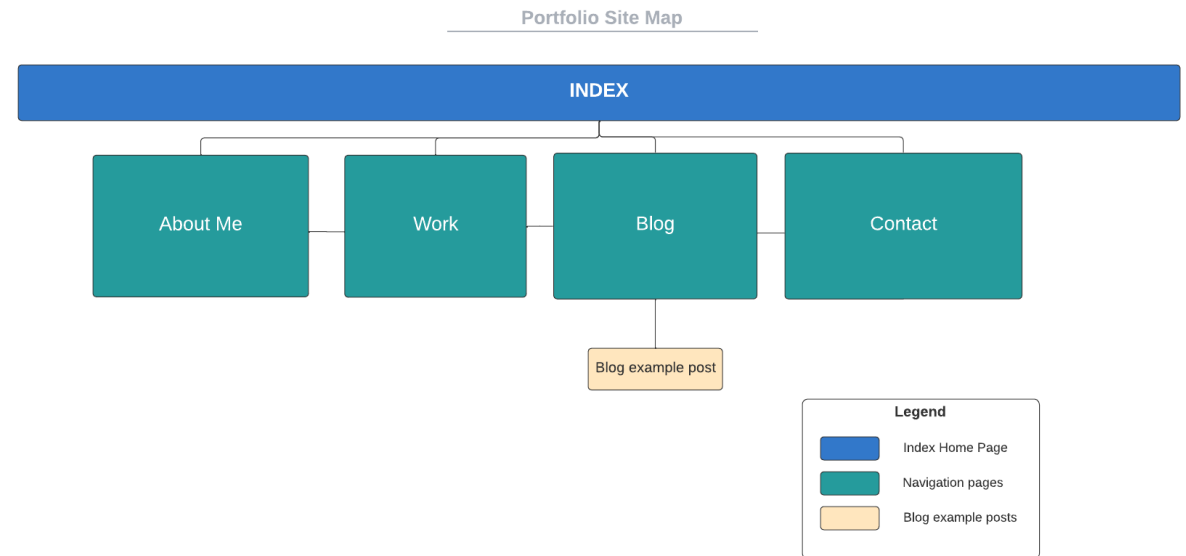

Website: Coolors was used to create the initial palette

Portfolio Color Palette

Site map

- Index page as the home page
- User can then navigate to other pages for specific information about me
- All pages link together so that user can navigate back and forth
- Pages to be navigated via a **navigation bar** and **footer** containing the links to each page

WIREFRAMES

-Designed using Figma-

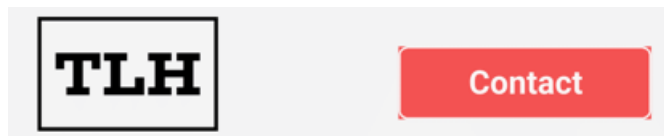

Nav bar

- Started with this as I wanted to decide how the user would easily navigate between pages
- Minimal so that the headings/links are displayed clearly
- Very top of all pages
- Own professional logo used on nav bar

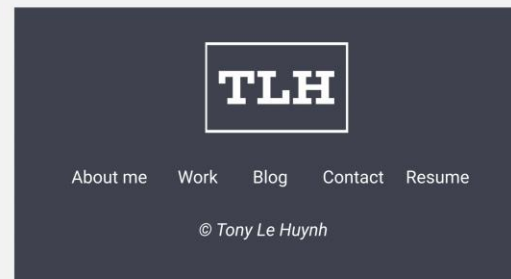

- Mobile view to show only contact button as that is the most important button for potential recruiters.
- This is the reason why the button is also styled and filled with red to stand out

Footer

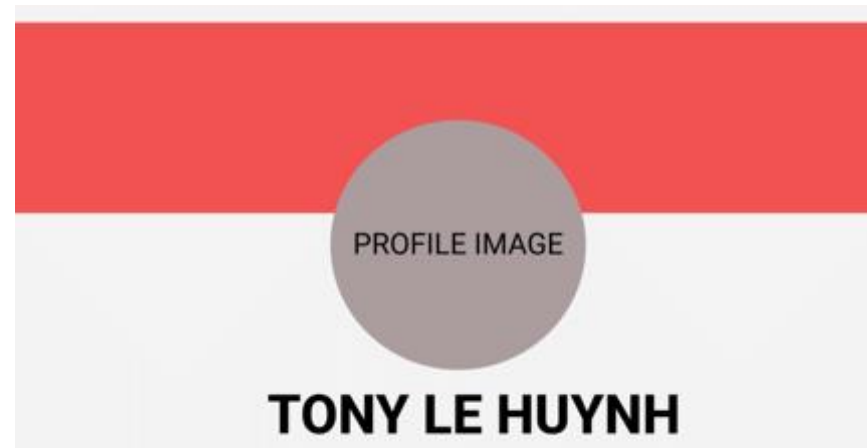

- Footer was also ideated next
- Important so that the user can navigate between pages once they've scrolled to the bottom
- Minimal

FOOTER - (WEBSITE, TABLET AND MOBILE VIEW)

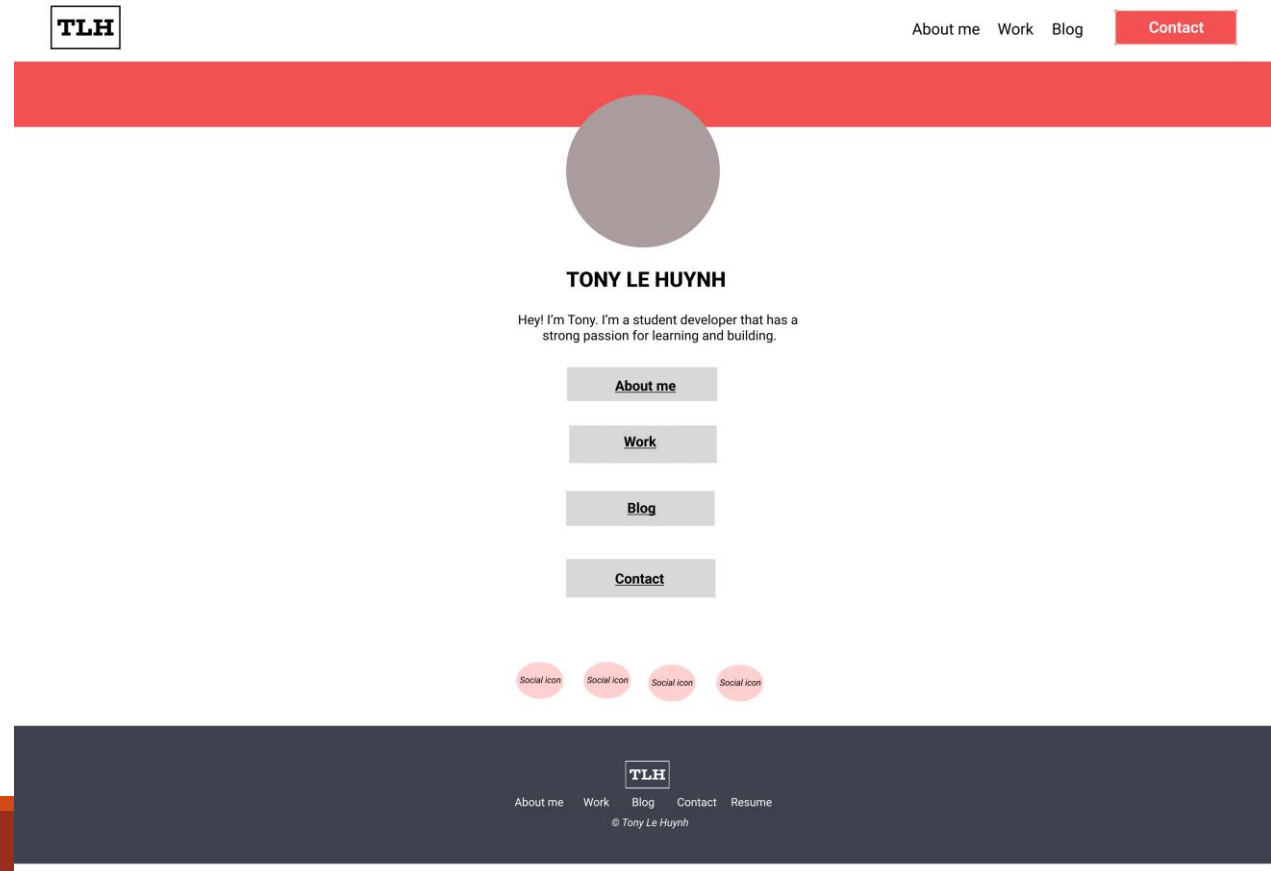

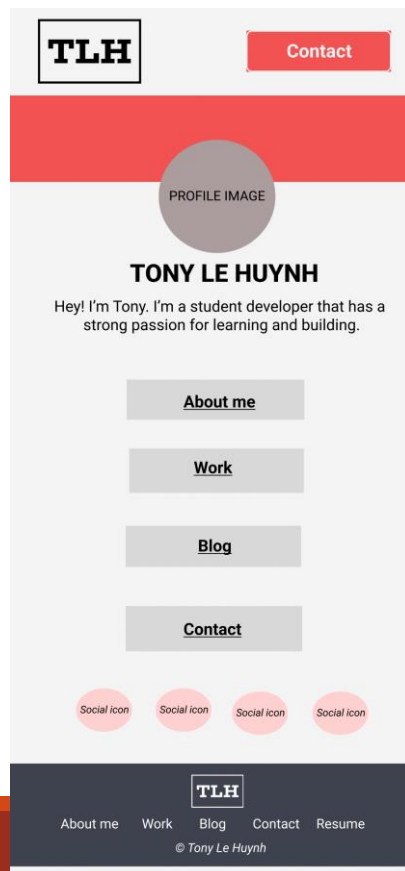

Header

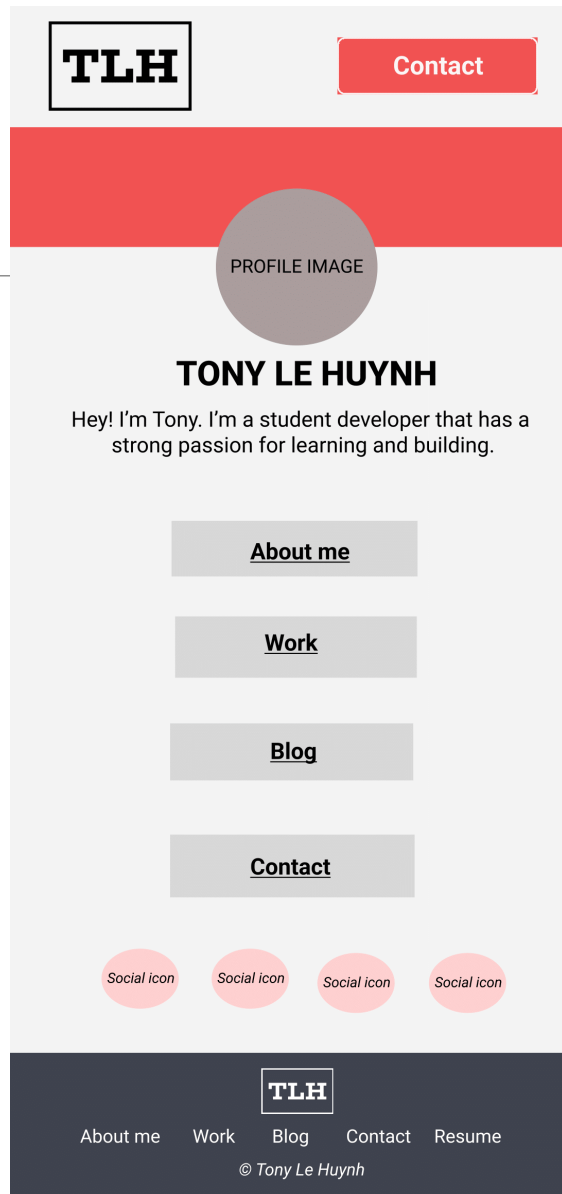

- Header to have consistent styling across all pages
- Wanted all pages to be primarily white in order to clearly display content
- This is why the header includes a red banner to provide the consistent color scheme for all pages
- Profile image and page title also included in the header. Image of myself + clearly show user what page they're on
- Below nav bar at the top

Initial design of index page

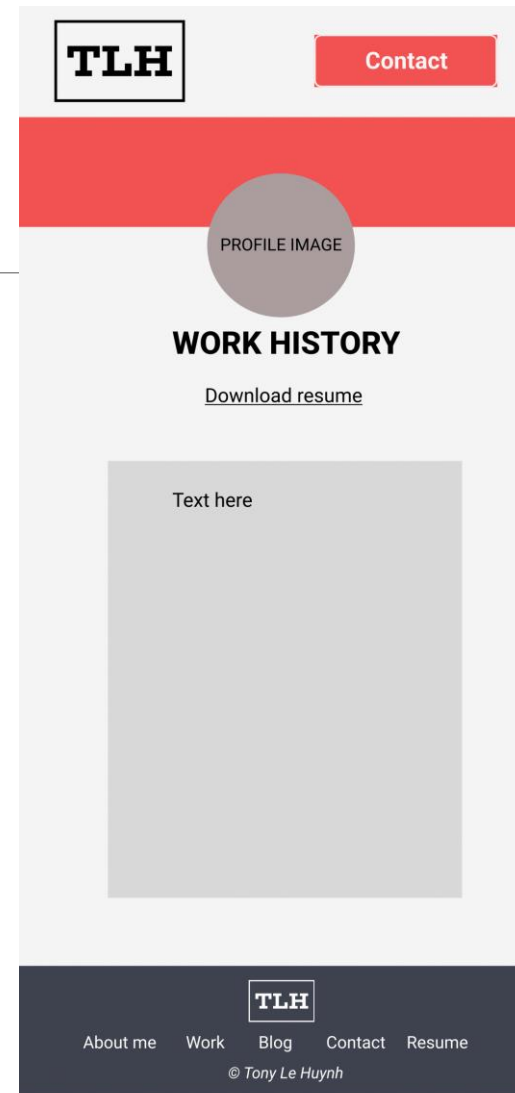

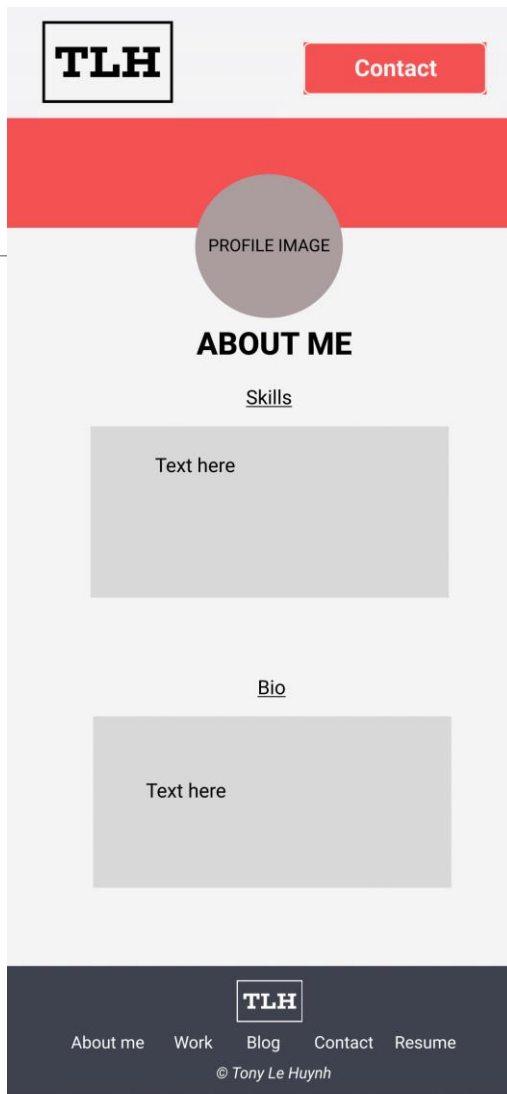

- All elements on page were designed to be centred in order to be easily translatable between all devices. (Expandable)
- Mobile first approach for design

- Nav bar at top as well as header section
- Footer at the bottom
- Minimal and clean
- Page content centred to easily translate between devices
- Brief bio section for index page
- Social icons at the bottom
- Content was eventually removed during coding process

-
- Index page set the tone for rest of pages
 - Consistent styling and theme

© Tony Le Huynh

- Social links to contact me via social media
- Also contact form option if they wanted to reach my email and Contact me directly from the website

Tech Stack

- HTML & CSS
- Program used was VS Code
- Figma and Colors used for wireframes and color palette
- Lucid Chart for the sitemap
- Font Awesome – Social icons
- Google Fonts – font used across whole portfolio website

Key website components (final)

Nav bar

About Me

Work

Blog

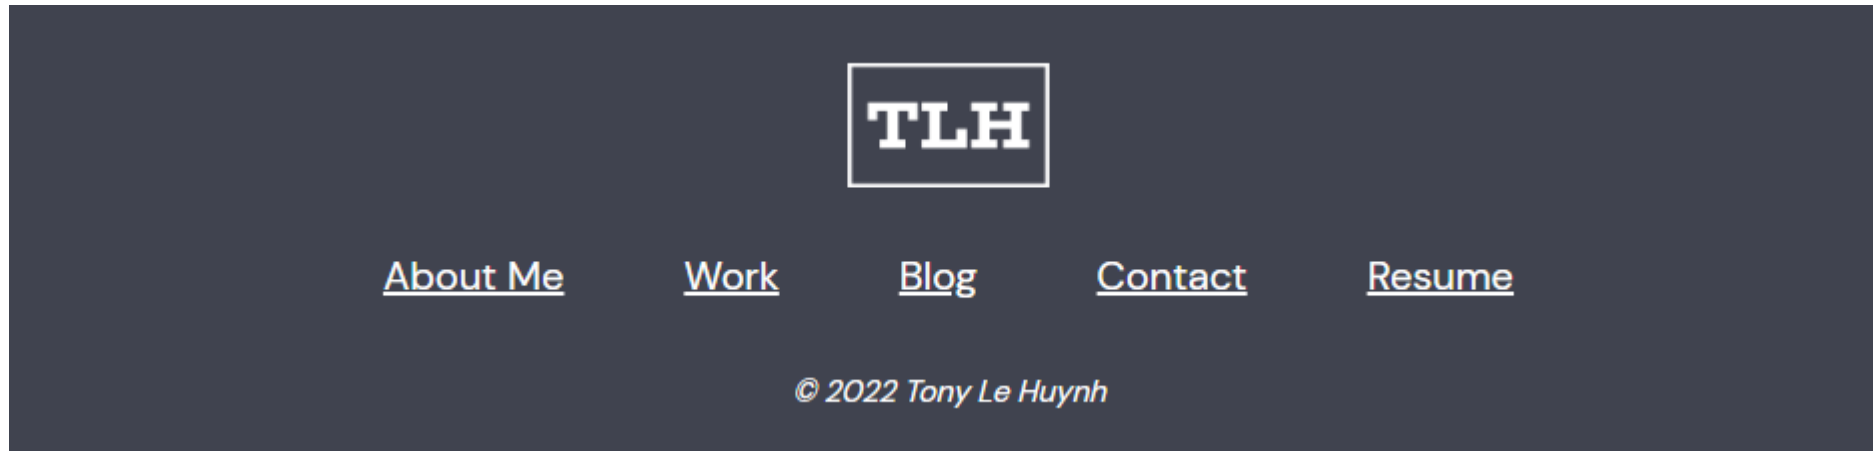

Contact

- Hover feature for all links and logo (to engage user)
- “Space between” the logo and the nav links
- Contact button styled red as it is the most important link + is consistent with website theme

Footer

Same line of thinking as the nav bar

- Resume link included just in case the user missed the resume icons

Header

- Banner to keep the color theme. Red element to break up the white for all pages
- Profile image to show what I look like. Picture has a box shadow in order to stand out from the red banner
- Page title

Social icons links

- Displayed on index and contact page
- Icons showing logos of social media pages for easy recognition
- Hover feature used to show user that these icons will link to my pages

Bio & Skills section (About me page)

- Clearly separated for ease of viewing (flex box display row)
- Skills initially was at the top in Wireframe however upon coding I realised it look best side by side

Bio

Hi! I'm a student software developer who's currently attending the Coder Academy Bootcamp. I have a background in business where prior to this I was enrolled in the Bachelor of Advanced Business course at UQ and was working as an business intern for the dental cover company smile.com.au. I also have customer support experience working for Jumbo Interactive as well as a few odd hospitality jobs. The reason for my change is because I realised that I had a love for building things and I found that the tech industry was the perfect industry for me. I am especially drawn into how forward thinking and innovative the industry is.

In my spare time I love singing, playing instruments (guitar & piano), dance, staying active, watching anime and making the most of my 20s. Please message me as well if you have any anime or film recommendations! 😊

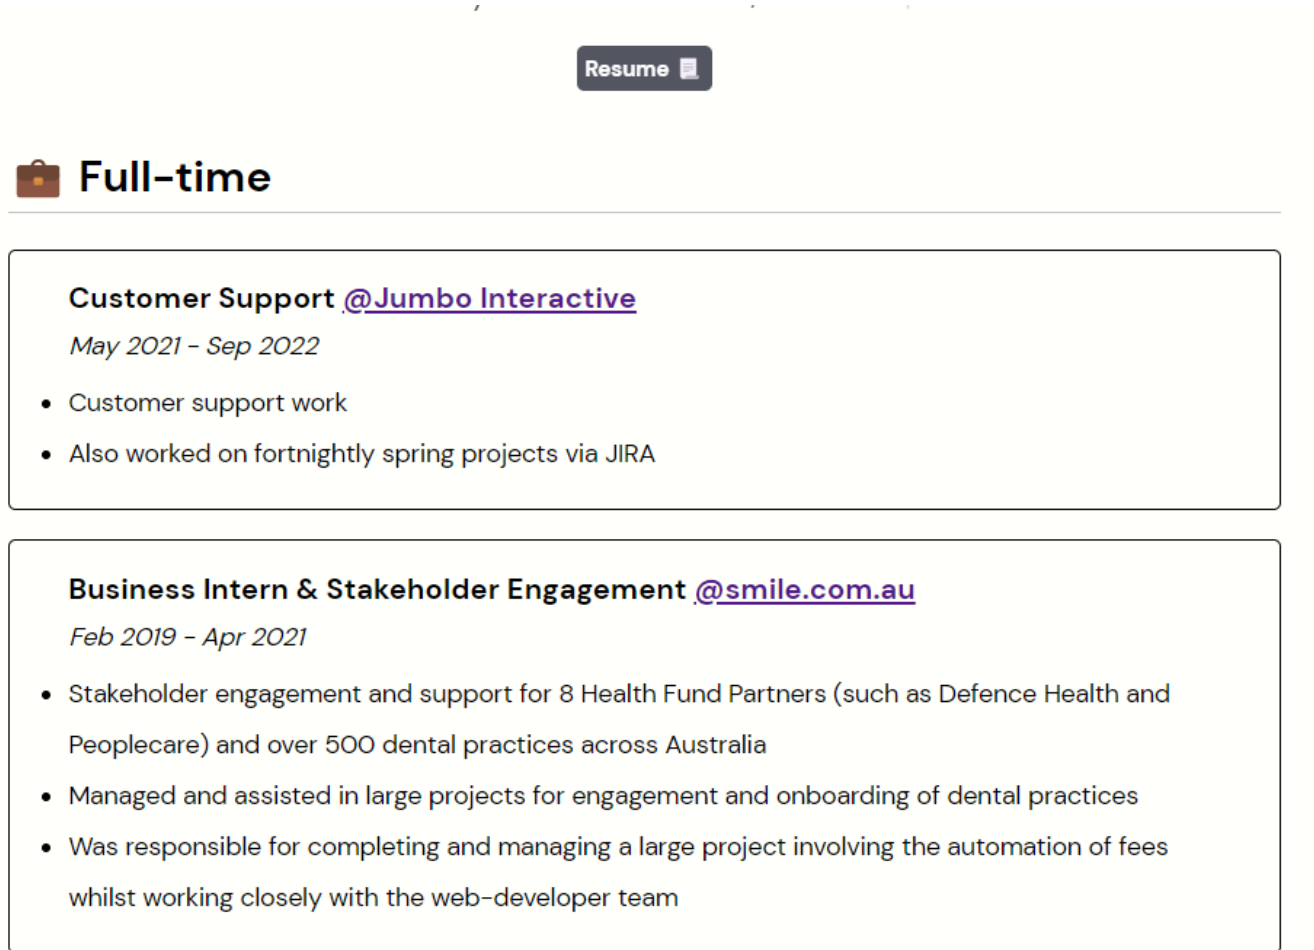

Blog post

- Each blog post acts as a card. 5 Blog posts displayed vertically and centred
- Hover effect with box shadow to once again engage user as a responsive website

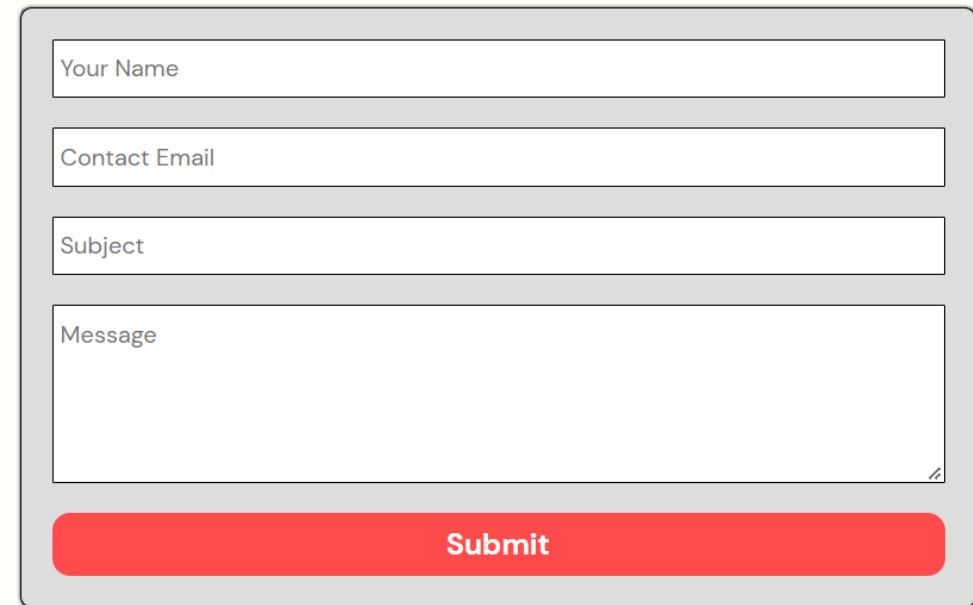

Work page

- Resume button at top (hover effect)
- Each card displays info on where I worked, Also has hover effect to engage user
- This was inspired by the blog post coding As it wasn't initially in the wireframe to be Displayed like this (as individual cards)
- Links also link to the company website so that the user can clearly see what company I worked at etc.

Contact form

- Simplistic and minimal
- Grey background color to stand out from white
- Red submit button with hover effect to stand out

A contact form with a grey background and rounded corners. It contains four input fields stacked vertically: 'Your Name', 'Contact Email', 'Subject', and 'Message'. The 'Message' field is a larger text area with a small icon in the bottom right corner. At the bottom of the form is a red 'Submit' button with white text.

Your Name

Contact Email

Subject

Message

Submit

Blog post details section

Clearly displays quick details about the blog post

Separated by light grey lines for easy viewing of details

Introduction

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Tortor id aliquet lectus proin nibh. Consequat ac felis donec et

Development process/challenges

- Opted to use my own photos that I took as placeholder images for blog posts in order to avoid any copyright or licensing issues
- My favourite part of coding the website was utilising the hover feature in CSS in order to make all the elements responsive and make the overall website feel professional
- There wasn't any challenge with responsive design between mobile/tablet due to the initial design decision to make all the content centred. This avoided any potential issues
- Ended up removing the cards in the index page of the wireframe as the nav bar and footer were already enough as links
- Longest time was taken on the wireframes, colors and initial theme. I did research on how other websites (*Notion, social media pages such as LinkedIn etc*) were designed as inspiration for how I should design mine. The long time I took on this paid off as it allowed for there to be little issues with the coding process.
